

Projektverfahren: Scrum

Info: In Scrum, there are few, but very clear rules to follow. The team organizes itself within a specific frame and gives itself small working packages. By reflecting and back-pedaling several times, the possibility to adapt the methods is given.

Origin/Intention: Scrum assumes, that processes cannot be planned properly in advance, that is why the process pauses every day to check if the parameters changed (and if so, to integrate them into the process). Communication is very important and is also being demanded.

Description:

There are three important roles: Product Owner (PO), Scrum Master (SM) and Team. The PO provides the guideline and receives the results. The independent Scrum Master supports the team methodically and moderates meetings.

The rest of the work is being done by the team in self-organisation-

Characteristics: The rules should be followed strictly.
